Tower Building cladding/window renewal.

The University are currently in the process of inviting tenders for construction work to renew the cladding and windows of the main Tower building from level 10 down to level 1 (excluding the low level extensions).

Upon satisfactory conclusion of the tendering process the University will issue a detailed programme of events established for the work over the coming further months of 2015.

This will indicate the access and any temporary short-duration decant arrangements necessary to undertake the works.

Whilst the works will inevitably cause some disruption the improvement in the facades environmental performance will be appreciated by all and your cooperation in the coming months will be much appreciated.

Further details will be available in July 2015.
