ACES Guide to Basic Photoshop
ACES Guide to Basic Photoshop

About this guide

This guide contains tips and tricks for making your scanned/photographed work look it’s tip-top for your digital portfolio.

We haven’t included everything – just the basics that you might need.

Remember – your digital portfolio is not the time to show off crazy photoshop wizardry. If you’re messing with colours, layers etc then this is creative work in its own right.

Editing your photographed/scanned work should enhance it, but not change it.

Download the ACES Guide to creating a Digital Portfolio

We also have a full guide on putting together your digital portfolio. This is available to download FOR FREE! at www.dundee.ac.uk/aces

How can ACES help me?

ACES hosts digital portfolio masterclasses and support sessions in November, December and January. Here we will show you everything you need to know.

At the digifolio sessions you will have access to the DJCAD photography and digital editing suites – so you can photograph and scan your work in professionally.

Current DJCAD students will be there to help you – it’s a team effort!

1-1 Support

Helen can also work with you 1-1 – in school or on-campus. Just send an email to aces@dundee.ac.uk for more help!
Crop

Instructions

• Select the ‘crop’ tool from the toolbar on the left hand side
• It looks like this:

• Hover over the top left corner that you want to crop from
• Click and drag to the bottom right corner that you want to crop to
• Double click on the selected area

• In other programmes (such as Paint.net) you might need to select the area you want to crop first, and then click the crop tool

Select first, then crop second.
Rotate

Instructions

- Select Image > Image Rotation > Arbitrary
- Insert the number of degrees that you want to rotate – try a small number first – and clockwise or anticlockwise

- Rotating in other programmes can be a little tricky if they only give you the option of rotating 90 degrees.
Levels (Brightness and Contrast)

Instructions

- Using the levels function to change the brightness and contrast gives you much better control.

Then you can move your light/midtone/dark levels to best enhance your image.
Curves (Colour Adjustment)

Instructions

- Depending on your lighting when taking your photos they can sometimes come out a bit too yellow or blue. Using the curves tool you can change this to make them more neutral.
- Select image > Adjustments > Curves

- On the dropdown menu ‘CHANNEL’ select which colour you need to adjust

- This will bring up a graph like this. To add colour in, click and hold the hot in the middle and push the curve up and left a little. To take colour out, pull it down and to the right.
Resolution and Image Size

Instructions

- Some universities have very particular requirements for file size, image resolution or pixel dimensions

- To adjust resolution... Select Image > Image size

- Where it says ‘Resolution’ change the number to 72

- To adjust pixel dimensions – where it says Centimeters – change this to pixels. The numbers in the boxes next to this will change.

- Then you just need to type in your longest dimension – usually 800 on the longest side.

- As long as your aspect ratio is locked (the little chain between ‘width’ and ‘height’ should be there, then it will auto recalculate what your other dimension should be.
ACES Tayside

ACES is a nationally funded initiative based across the four art schools in Scotland. Our job is to encourage, educate and empower senior-phase pupils to consider careers and higher education in art, design and architecture.

Our broad programme of events and 1-1 support helps pupils to explore their options, create a competitive application and develop a strong portfolio of work.

ACES advice is always impartial, and we support pupils wherever they want to go.

For more information about our events, support and to see if you are eligible to be a part of aces, please visit our website.
